5.4.1 .....	3
Overall Improvements .....	4
JUnit Platform .....	4
JUnit Jupiter .....	4
JUnit Vintage .....	4
5.4.0 .....	4

This document contains the *change log* for all JUnit 5 releases since 5.4 GA.

Please refer to the [User Guide](#) for comprehensive reference documentation for programmers writing tests, extension authors, and engine authors as well as build tool and IDE vendors.

## 5.5.0-M2

**Date of Release:**

**Scope:**

For a complete list of all *closed* issues and pull requests for this release, consult the [5.5 M2](#) milestone page in the JUnit repository on GitHub.

## JUnit Platform

### Bug Fixes

- 

### Deprecations and Breaking Changes

- 

### New Features and Improvements

- `AnnotationSupport.findRepeatableAnnotations()` now finds repeatable annotations used as meta-annotations on other repeatable annotations.
- New overloaded variants of `Assertions.assertLinesMatch(...)` that accept a `String` or a `Supplier<String>` for a custom failure message.
- `Assertions.assertLinesMatch`'s failure message now emits each expected and actual line in a dedicated line.

## JUnit Jupiter

### Bug Fixes

- Execution of dynamic tests registered via a `@TestFactory` method no longer results in an `OutOfMemoryError` if the executables in the dynamic tests retain references to objects consuming large amounts of memory. Technically speaking, JUnit Jupiter no longer retains references to instances of `DynamicTest` after they have been executed.

### Deprecations and Breaking Changes

-

## New Features and Improvements

- `MethodOrderer.Random` now generates a default random seed only once and prints it to the log in order to allow reproducible builds.
- Methods ordered with `MethodOrderer.Random` now execute using the `SAME_THREAD` concurrency mode instead of the `CONCURRENT` mode when no custom seed is provided.
- New `emptyValue` attribute in `@CsvFileSource` and `@CsvSource`.
- All methods in the `TestWatcher` API are now interface `default` methods with empty implementations.
- New `InvocationInterceptor` extension API (see [User Guide](#) for details)

## JUnit Vintage

### Bug Fixes

- 

### Deprecations and Breaking Changes

- 

### New Features and Improvements

- 

## 5.5.0-M1

**Date of Release:** March 19, 2019

**Scope:** Configurable test discovery implementation

For a complete list of all *closed* issues and pull requests for this release, consult the [5.5 M1](#) milestone page in the JUnit repository on GitHub.

## JUnit Platform

### New Features and Improvements

- Configurable test discovery implementation that can be reused by different test engines (see Javadoc of the [org.junit.platform.engine.support.discovery](#) package).
- New `isFinal()` and `isNotFinal()` methods in `ModifierSupport`.

## JUnit Jupiter

## New Features and Improvements

- Expected and actual values are now supplied for failed `boolean` assertions for enhanced IDE and reporting support — for example, when `assertTrue()` or `assertFalse()` fails.
- `@ValueSource` now additionally supports literal values of type `boolean` for parameterized tests.

## JUnit Vintage

No changes.

## 5.4.2

**Date of Release:** April 7, 2019

**Scope:** Bug fixes since 5.4.1

For a complete list of all *closed* issues and pull requests for this release, consult the [5.4.2](#) milestone page in the JUnit repository on GitHub.

## JUnit Platform

No changes.

## JUnit Jupiter

### Bug Fixes

- Parameterized tests no longer throw an `ArrayStoreException` when creating human-readable test names.

## JUnit Vintage

### Bug Fixes

- Safeguard against `Runners` that only report tests as failed but not as started or finished such as Spock in case of failures during data-provider preparation.

## 5.4.1

**Date of Release:** March 17, 2019

**Scope:** Bug fixes since 5.4.0

For a complete list of all *closed* issues and pull requests for this release, consult the [5.4.1](#) milestone page in the JUnit repository on GitHub.

# Overall Improvements

- Fix `Specification-Version` entry in JAR manifests

## JUnit Platform

### Bug Fixes

- Restore compatibility with Android: Unsupported `Pattern` flags, like `UNICODE_CHARACTER_CLASS`, no longer cause class `StringUtils` to fail during initialization.

## JUnit Jupiter

### Bug Fixes

- Deletion of a temporary directory within a test no longer results in a test failure for a temporary directory supplied via `@TempDir`.

## JUnit Vintage

### Bug Fixes

- Fix reporting of finish events of intermediate containers with static and dynamic children, e.g. Spock test classes with regular and `@Unroll` feature methods in a test suite.

## 5.4.0

**Date of Release:** February 7, 2019

### Scope:

- New `junit-jupiter` dependency-aggregating artifact for simplified dependency management in build tools
- XML report generating listener
- Test Kit for testing engines and extensions
- `null` and `empty` argument sources for `@ParameterizedTest` methods
- `@TempDir` support for temporary directories
- Custom display name generator API
- Support for ordering test methods
- Support for ordering extensions registered via `@RegisterExtension`
- `TestWatcher` extension API
- API for accessing outer test instances in `ExtensionContext`

- JUnit 4 `@Ignore` migration support
- Improved diagnostics and error reporting
- Improved documentation and user experience in the User Guide
- Discontinuation of the `junit-platform-surefire-provider`
- Various minor improvements and bug fixes

For complete details consult the [5.4.0 Release Notes](#) online.
