This document contains the *change log* for all JUnit 5 releases since 5.5 GA.

Please refer to the User Guide for comprehensive reference documentation for programmers writing tests, extension authors, and engine authors as well as build tool and IDE vendors.

5.6.0-M1

Date of Release:

Scope:

For a complete list of all *closed* issues and pull requests for this release, consult the 5.6 M1 milestone page in the JUnit repository on GitHub.

JUnit Platform

Bug Fixes

• Module org.junit.platform.launcher now reads java.logging due to usage of types in package java.util.logging.

Deprecations and Breaking Changes

• In the EngineTestKit API, the all(), containers(), and tests() methods in EngineExecutionResults

have been deprecated in favor of the new allEvents(), containerEvents(), and testEvents() methods, respectively. The deprecated methods will be removed in JUnit Platform 1.7.0.

New Features and Improvements

- New printFailuresTo(PrintWriter, int) method in TestExecutionSummary that allows one to specify the maximum number of lines to print for exception stack traces.
- The junit-platform-commons module no longer has a dependency on the java.compiler module (in terms of the Java Module System). Specifically, a new internal utility has been introduced in PackageUtils that implements functionality equivalent to javax.lang.model.SourceVersion.isName(CharSequence) from the java.compiler module.
- Exceptions thrown by test engines during discovery and execution are now reported to TestExecutionListeners.
- Module org.junit.platform.console now provides a java.util.spi.ToolProvider implementation that can be acquired by ToolProvider.findFirst("junit") when running on Java 9 or above.

JUnit Jupiter

Bug Fixes

•

Deprecations and Breaking Changes

• @EnabledIf and @DisabledIf have been removed from Jupiter's API. Script-based condition APIs and their supporting implementations were deprecated in JUnit Jupiter 5.5 with the intent to remove them in JUnit Jupiter 5.6. Users must now rely on a combination of other built-in conditions or create and use a custom implementation of ExecutionCondition to evaluate the same conditions.

New Features and Improvements

- Support for multi-character delimiters in <code>@CsvSource</code> and <code>@CsvFileSource</code>.
- Support for custom null values in @CsvSource and @CsvFileSource.
- Documented support for comments in CSV files loaded via @CsvFileSource.
- Auto-detection of enum type from method signature for @EnumSource.
- New TypeBasedParameterResolver<T> abstract base class that serves as a generic adapter for the ParameterResolver API and simplifies the implementation of a custom resolver that supports parameters of a specific type.
- New configuration parameter junit.jupiter.execution.timeout.mode to control whether timeouts are applied to tests or not. Supported values are: enabled, disabled, and disabled_on_debug.

JUnit Vintage

Bug Fixes

• JUnit 3 suites with duplicate test names are now reported correctly.

Deprecations and Breaking Changes

•

New Features and Improvements

- Improve performance for projects with a large number of tests.
- Improve performance for test classes with a large number of methods.

5.5.2

Date of Release: September 8, 2019

Scope: Bug fixes since 5.5.1

For a complete list of all *closed* issues and pull requests for this release, consult the 5.5.2 milestone page in the JUnit repository on GitHub.

Overall Improvements

- Published artifacts have been fixed regarding module descriptors.
 - Binary JAR files contain module-info.class.
 - Source JAR files contain module-info.java.
 - Javadoc JAR files contain neither module-info.class nor module-info.java.

JUnit Platform

No changes.

JUnit Jupiter

Bug Fixes

• The JupiterTestEngine no longer crashes without executing any tests if JUnit 4 is on the not. classpath but Hamcrest is Specifically, initialization of the OpenTest4JAndJUnit4AwareThrowableCollector if class no longer org.junit.internal.AssumptionViolatedException class cannot be loaded from the classpath due to a missing Hamcrest dependency.

JUnit Vintage

No changes.

5.5.1

Date of Release: July 20, 2019

Scope: Bug fixes since 5.5.0

For a complete list of all *closed* issues and pull requests for this release, consult the 5.5.1 milestone page in the JUnit repository on GitHub.

JUnit Platform

No changes.

JUnit Jupiter

Bug Fixes

• Fix test discovery and execution of inherited @Nested classes.

JUnit Vintage

No changes.

5.5.0

Date of Release: June 30, 2019

Scope:

- Declarative @Timeout support
- New InvocationInterceptor extension API
- New LifecycleMethodExecutionExceptionHandler extension API
- Deprecation of script-based conditions (@EnabledIf and @DisabledIf)
- Configurable test discovery implementation for TestEngine authors
- Explicit Java module descriptors
- · Various minor improvements and bug fixes

For complete details consult the 5.5.0 Release Notes online.
